## Foreword

The Ministry of Health elevated the Pharmacy section to a division because of the pharmaceutical sector's important contribution to achieving the overall outcomes and goals related to the health sector. The *National Health Policy*, the *National Drugs Policy*, the *Health Sector Strategic and Investment Plan*, and the *National Pharmaceutical Sector Strategic Plan* emphasize the promotion of appropriate use of medicines, health and laboratory supplies.

Appropriate use of medicines requires good diagnostic skills and access to well-performed laboratory services, good prescribing practices that follow clinical guidelines, good dispensing practices, and adherence to treatment by the patient. Very importantly, appropriate use requires the availability of essential medicines and health supplies (EMHS) at every service delivery point combined with an efficient monitoring and evaluation system.

For the first time in Uganda, essential medicines, health and laboratory supplies have been integrated into one list with the recognition that all three (essential medicines, health and laboratory supplies) are integral to the diagnosis and appropriate treatment of diseases. In addition, the combined essential medicines, health and laboratory supplies list has been level of use categorized and VEN classified. VEN classification is a

method for prioritizing items according to health impact. Both level of use and VEN classification are included to help facilities prioritize which items to order with the often limited funding they are allocated. By prioritizing correctly, stock levels of life-saving medicines and health supplies at the facility will increase, leading to better health care service for Ugandans. Using the Essential Medicines and Health Supplies List for Uganda (EMHSLU) to guide the quantification and procurement processes by level of use will result in the right conditions being treated at the right level of use and will possibly improve the referral system and overall health care services.

After VEN classification, 32% (195/604) of medicines, 32% (176/553) of health supplies and 36% (369/1013) of laboratory supplies were classified as Vital. If facilities prioritize the procurement (or ordering) of Vital medicines, health and laboratory supplies instead of procuring Essential and Necessary items the quantities of Vital items would increase proportionally to the increased budgetary allocation previously spend on Essential and Necessary items. This increase of Vital items would improve the facilities' ability to manage life-threatening conditions and diseases.

During their updates, the EMHSLU and *Uganda Clinical Guidelines* (UCG) were harmonized to ensure inclusion in the EMHSLU of all essential medicines, health and laboratory supplies needed to treat common conditions according to the UCG.

I recommend that the EMHSLU 2012 be used not only by providers in the public sector, but also by providers in the private not for profit and private for profit sectors to assure appropriate treatment and use of medicines, thereby avoiding polypharmacy. This will increase cost-effectiveness of the use of medicines, health and laboratory supplies in Uganda.

Hon. Dr. Ondo J. D Christine

## Introduction

In 1999, the World Health Organization Expert Committee on Essential Medicines defined essential medicines as those medicines that satisfy the health care needs of the majority of the population at a price patients and the community can afford. The essential medicines should be available at all times, in adequate amounts, and in appropriate dosage forms.

The essential medicines concept is a public health principle that promotes efficient use of resources by establishing and using a limited list of carefully selected medicines. By selecting a few medicines, better treatment and easier supply, storage, and distribution can be assured at a lower cost. The concept is based on the observations that—

- The vast majority of health problems for most of the population can be treated with a small number of carefully selected medicines.
- In practice, most doctors and other health professionals routinely use fewer than 200 medicines; training and clinical experience should focus on the proper use of these medicines.

### ***VEN classification***

In VEN classification, items (medicines, health and laboratory supplies) are divided into three groups –

- Vital (V)—items are used to diagnose and manage life-threatening diseases
- Essential (E)—items are effective in diagnosis and management of less severe, but nevertheless, widespread illnesses
- Necessary (N)—items are used to diagnose or manage diseases with less impact on the population, or items with a high cost for marginal therapeutic benefit

Vital items have first priority, because they are lifesaving or critical for achieving targeted health outcomes. If these items are not available, it could mean the death of a patient or irreparable injury. Essential items have second priority; if these items are not available, the patient could suffer pain or great discomfort. Necessary items are needed and therefore on the order form; however, they have third priority.

The VEN-classified 2012 Essential Medicines and Health Supplies List for Uganda (EMHSLU) will help NMS prioritize which medicines and supplies to procure and which products to include in kits. Health facilities that do place orders for essential medicines, health and laboratory supplies are expected to order Vital products first, and if the budget allows, then order Essential products followed by Necessary products.

With limited resources available, facilities need to consistently keep the most important items on hand to manage and diagnose life-threatening conditions. VEN classification guides health workers to correctly prioritize items to procure and order based on health impact. Procurement, stock, and storage management are simplified by having a limited number of items available, which leads to better supply chain efficiency and effectiveness.

***Uganda Medicine and Therapeutic Advisory Committee (UMTAC)***

The Uganda Medicines and Therapeutic Advisory Committee (UMTAC) is a newly formed committee under Ministry of Health (MOH) with the overall goal to promote availability and appropriate use of medicine and health supplies in the private and public sectors.

UMTAC is comprised of up to 20 members that are appointed by the Director General Health Services. The members are specialists from different areas of Uganda's health care sector including Mulago Hospital, Makerere University and MOH technical programs. Please refer to the Acknowledgements section for a full list of UMTAC members. The Quality Assurance Department and the Pharmacy Division provide the Secretariat for UMTAC. For more details on UMTAC, please visit [www.UMTAC.ug](http://www.UMTAC.ug).

One of UMTAC's first major responsibilities have been the revision of the 2007 Essential Medicines List for Uganda.

***Development of Essential Medicines and Health Supplies List for Uganda***

UMTAC decided to extend the list to include health and laboratory supplies, introduce the VEN classification and categorize items as general or specialist. The general items can be used by all prescribers in HC1-4, hospital (H), regional referral hospital (RR) and national referral hospital (NR). Specialist items can only be used by specialized workers such as dentists, surgeons or midwives and is needed in lower quantities than the general products.

The three lists were drafted on the basis of the 2010 *Uganda Clinical Guidelines*, treatment guidelines from MOH public health programmes and the work from three UMTAC sub-committees; the medicine list sub-committee headed by the Pharmacy Division, the health supplies list sub-committee headed by a group of surgeons from Mulago Hospital and the laboratory supplies sub-committee headed by Central Public Health Laboratories. The draft 2012 EMHSLU was finalised following wide consultation including a three-day stakeholder workshop attended by 56 specialists and wide circulation of the proposed lists.

When deciding on the items to include in the lists, price of formulation was considered. For example, syrups and suspensions are usually more expensive than tablets and therefore are given a lower priority. The VEN classification of medicine was based on specialists' experience on the best ways to treat important conditions and diseases in Uganda. VEN classification of health and laboratory supplies was based on which items are needed for basic health care and treatment of important diseases.

### ***Composition of the EMHSLU***

The EMHSLU 2012 comprise a total of 604 medicines, 553 health supplies and 1013 laboratory supplies with 32%, 32% and 36% items classified as Vital on each list.

*Changes to the 2007 EMLU*

A total of 104 medicines were deleted from the 2007 Essential Medicine List for Uganda (EMLU) and 176 new medicines were included in 2012 essential medicines list. The main reasons for deletion and addition of medicines were new treatment guidelines and development of new and better formulation or fixed dose combinations.

### **Essential medicines deleted from 2007 edition**

1. Acyclovir tablet 400mg
2. Alcuronium chloride injection 5mg/ml IV
3. Amoxicillin injection (PFR) 500mg IV/IM/inf
4. Amoxicillin syrup (PFR) 125mg/5ml
5. Ascorbic acid (vitamin C) tablet 100mg

### ***Amendments***

Proposals for amendments to the EMHSLU 2012 with relevant arguments and literature should be send to:

Secretariat,

Uganda Medicines and Therapeutics Advisory Committee,  
Pharmacy Division, Ministry of Health,

PO Box 7272, Kampala

morries2001@yahoo.com or sebisubi@yahoo.co.uk

## **How to use the list**

### ***Medicine names***

The relevant International Non-proprietary Name (INN) or generic names are used throughout the list. According to the National Medicines Policy and Authority Statute 1993 sec 12, generic names shall be used for prescribing and labelling (i.e., including dispensing) of medicines, except where no such generic or suitable alternative non-proprietary name exists. The INN name should be written on prescriptions and dispensed medicine, never use the brand name and abbreviations should be avoided unless the abbreviation is well accepted and known. For example, AZT a well known abbreviation for zidovudine.

### ***Level of use (L)***

Each item has a designation representing the lowest level of use; all levels above and including this level are allowed to prescribe and dispense the item. This designation is in line with the diagnostic and clinical skills expected to be

available at that level. In the specialist lists, the use of an item is further restricted to facilities where a specific type of clinical and/or diagnostic expertise is available (e.g., certain ophthalmological preparations). Below are the levels used in the lists including the highest educational level for the lower health facilities:

BB	Blood bank
NR	National referral hospital
RL	Regional laboratory
RR	Regional referral hospital
H	Hospital
HC4	Health centre 4 (Medical Officer)
HC3	Health centre 3 (Clinical Officer)
HC2	Health centre 2 (Enrolled Comprehensive Nurse)
HC1	Health centre 1 (community level)

### ***VEN classification (C)***

Interpretation of the VEN classification is such that if a commodity is classified as Vital at HC2, it presupposes that the commodity is also Vital at higher level of use i.e. HC3, HC4 and hospitals. However, the item might not be stocked and regarded Vital at the higher levels of use as other alternatives may be available and preferred. If a commodity is Vital at HC4, it implies that the commodity is Vital at HC4 and above, but is not available for use in HC3 and HC2 at all. The definitions of the three groups are –

- Vital (V)—medicines used to treat life-threatening diseases and health supplies and laboratory commodities that are necessary for basic healthcare
- Essential (E)—medicines are effective to treat less severe, but nevertheless, widespread illnesses

- 
- Necessary (N)—medicines used for diseases with less impact on the population, medicines of doubtful efficacy, or medicines with a high cost for marginal therapeutic benefit

### ***Column labels***

In the following lists, the three last columns are labelled as follows –

DS = dosage form

STR = strength

L = Level of use

C = VEN classification
